Please reject the NAB's petition 04-160. I drive cross-country in a semi-truck hauling products for American consumers. XM Radio is the best thing that ever happened to trucking, because regular airway broadcast stations are useless, as the signal is lost within 1/2 hour of tuning in as the truck moves down the highway. XM Instant Traffic and weather is an important tool I use while driving, and to deprive truckers of this benefit would be an unfair blow to us hardworking individuals. Thank you on behalf of all truckers for considering this issue.
